### **Project nr. 1: Incinerator**

**Summary:** Bwindi Community Hospital is seeking funding to construct a modern incinerator that can incinerate all wastes produced by the hospital.

**Description:** As the hospital grows and expands, waste disposal becomes one of the crucial aspects in prevention of infections and protecting the environment from contamination of pathogenic organisms. The hospital currently has a small incinerator that is overwhelmed by the volume of waste generated. This incinerator was originally designed to serve a health Centre II in 2004, but the unit has since grown into a 112 bed hospital, serving a population of 100,000 people. Additionally, there is an upcoming nursing school in Bwindi which will undoubtedly increase waste production in the area.

The incinerator will provide the required temperature and long residence time that is necessary for complete destruction of all hospital waste that could be infected with pathogenic organisms. It will also help in the sorting, selection and separation process before waste is incinerated.

The new incinerator will be a complete unit with sorting area where waste will be graded before it is set for incineration. There will be a 3 roomed building next to the incinerator having 3 storages: fuel, compressor unit and other accessories. Added to this is an office used as storage for protective gear. A toilet and washing room and also a water catchment tank with aseptic tank) Attached is the scanned copy of the incinerator structure.

The above incinerator will amply manage all hospital and other wastes produced in this area therefore minimizing the undesirable environment impact of the hospital; protect hospital workers from occupational hazards; and protect the environment and public health.
